Equipment Forging Guide

Forge eligible equipment with Professor Komby at the Gate of Chaos Tower.

What is Forging?

Forging lets you combine two eligible pieces of equipment and preview the resulting stats before you commit. Use Professor Komby and choose "I'm here to [Forge]!".

Eligible Equipment

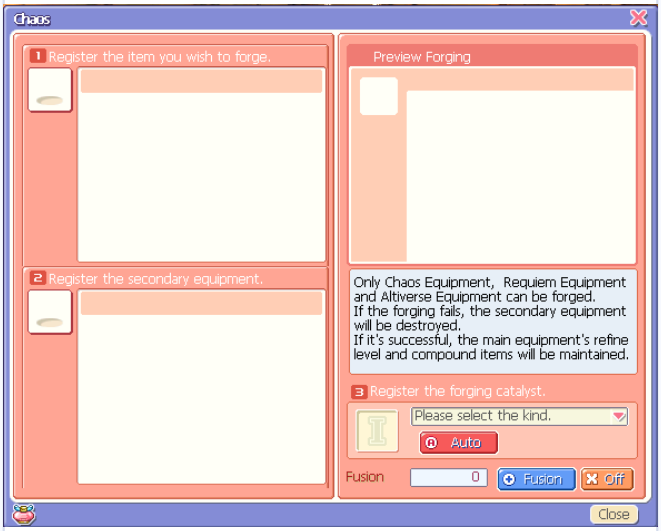

Only Chaos Equipment, Requiem Equipment, and Altiverse Equipment can be forged. The forge window itself confirms these three equipment families.

IMPORTANT - Relog after a successful forge

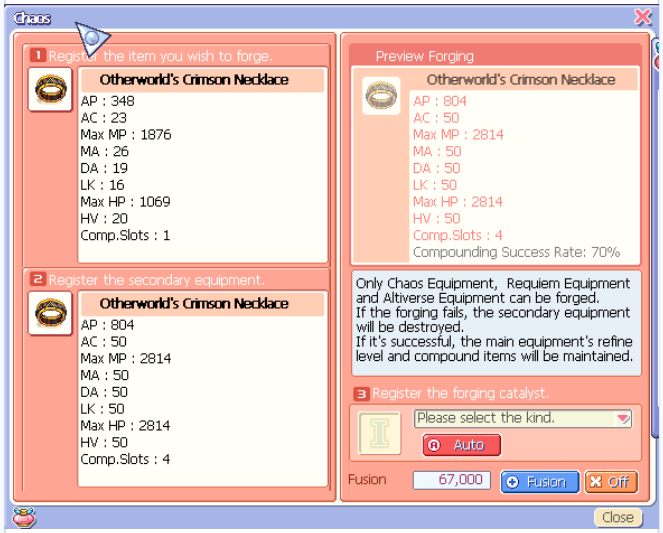

After forging, you MUST relog your character to see the equipment changes correctly. If you stay logged in, the equipment may still appear with its old values until you reconnect.

How to Forge

Follow these steps in Professor Komby's Forge window.

1. Open the Forge window

2. Register both equipment pieces

1 Main equipment

Register the item you wish to forge. This is the item shown as the main equipment in the preview.

2 Secondary equipment

Register the second eligible equipment. The Preview Forging panel immediately shows the possible result.

3 Check the preview

Review the resulting stats, Compound Slots and the displayed forging success rate before confirming.

4 Confirm the Fusion fee

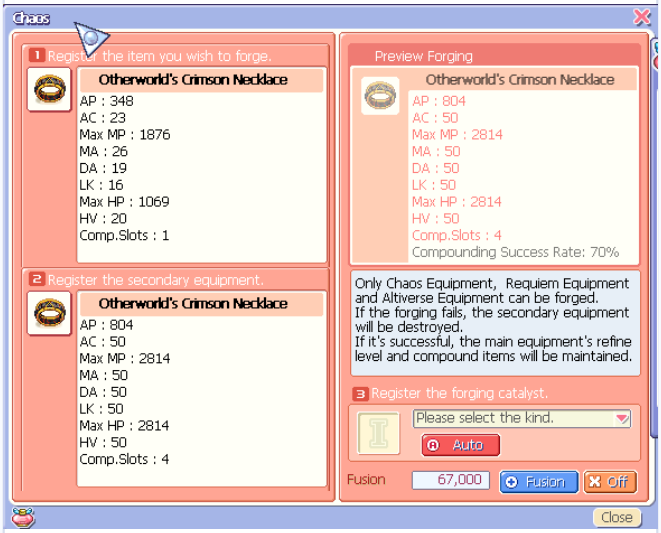

The fee is shown at the bottom of the window. In the example screenshot, the fee is 67,000 Galders.

Failure warning

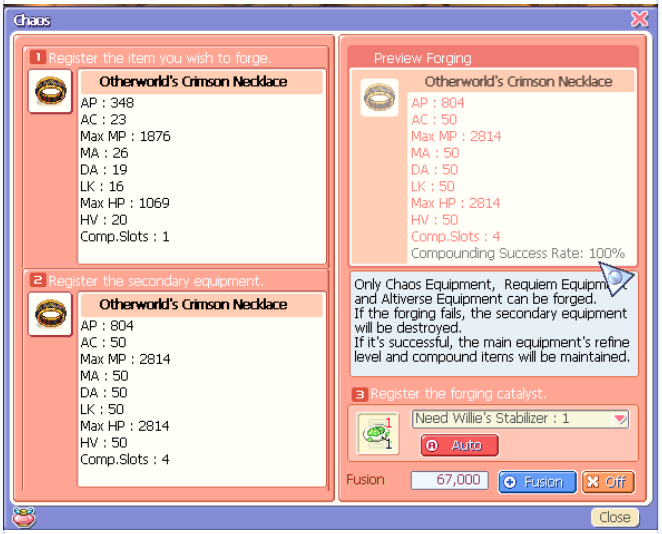

The Forge window warns that if forging fails, the secondary equipment will be destroyed. Always check the success rate before you proceed.

Increase the Success Rate

A forging catalyst can improve your chance of success.

WITHOUT CATALYST - 70%

WITH STABILIZER - 100%

Forging catalyst

The catalyst slot is optional. In the example shown above, the base Compounding Success Rate is 70%. Registering 1 New Willie's Stabilizer raises the displayed success rate to 100%.

Before pressing Fusion

Compare the Preview Forging panel with your current equipment. Make sure the result, Compound Slots, success rate and fee are exactly what you want.

Successful forge message

After Forging

Check the result, then relog to refresh the equipment data.

Result

After a successful forge, inspect the equipment and confirm the new stats and Compound Slots.

What the game keeps

The Forge window states that, on success, the main equipment's refine level and existing compound items are maintained.

RELOG REQUIRED

This step is essential: log out and log back in after a successful forge. The equipment change may not display correctly until the character reconnects.

Quick checklist

- Use an eligible equipment family.
- Check the preview carefully.
- Use a catalyst if you want a higher success rate.
- Pay the displayed Fusion fee.
- After success: RELOG before checking the final item.
